

Hitchhiker's Guide to Galactica Network Citizenship

Galactica.com is one of the trailblazers in the domain of Cypher States

— blockchain native Supranational organisations capable of all the political, economic and social functions of Nation States.

Superior in its technological design, the **Cypher State** will transcend nation states in transparency, efficiency and sheer network size.

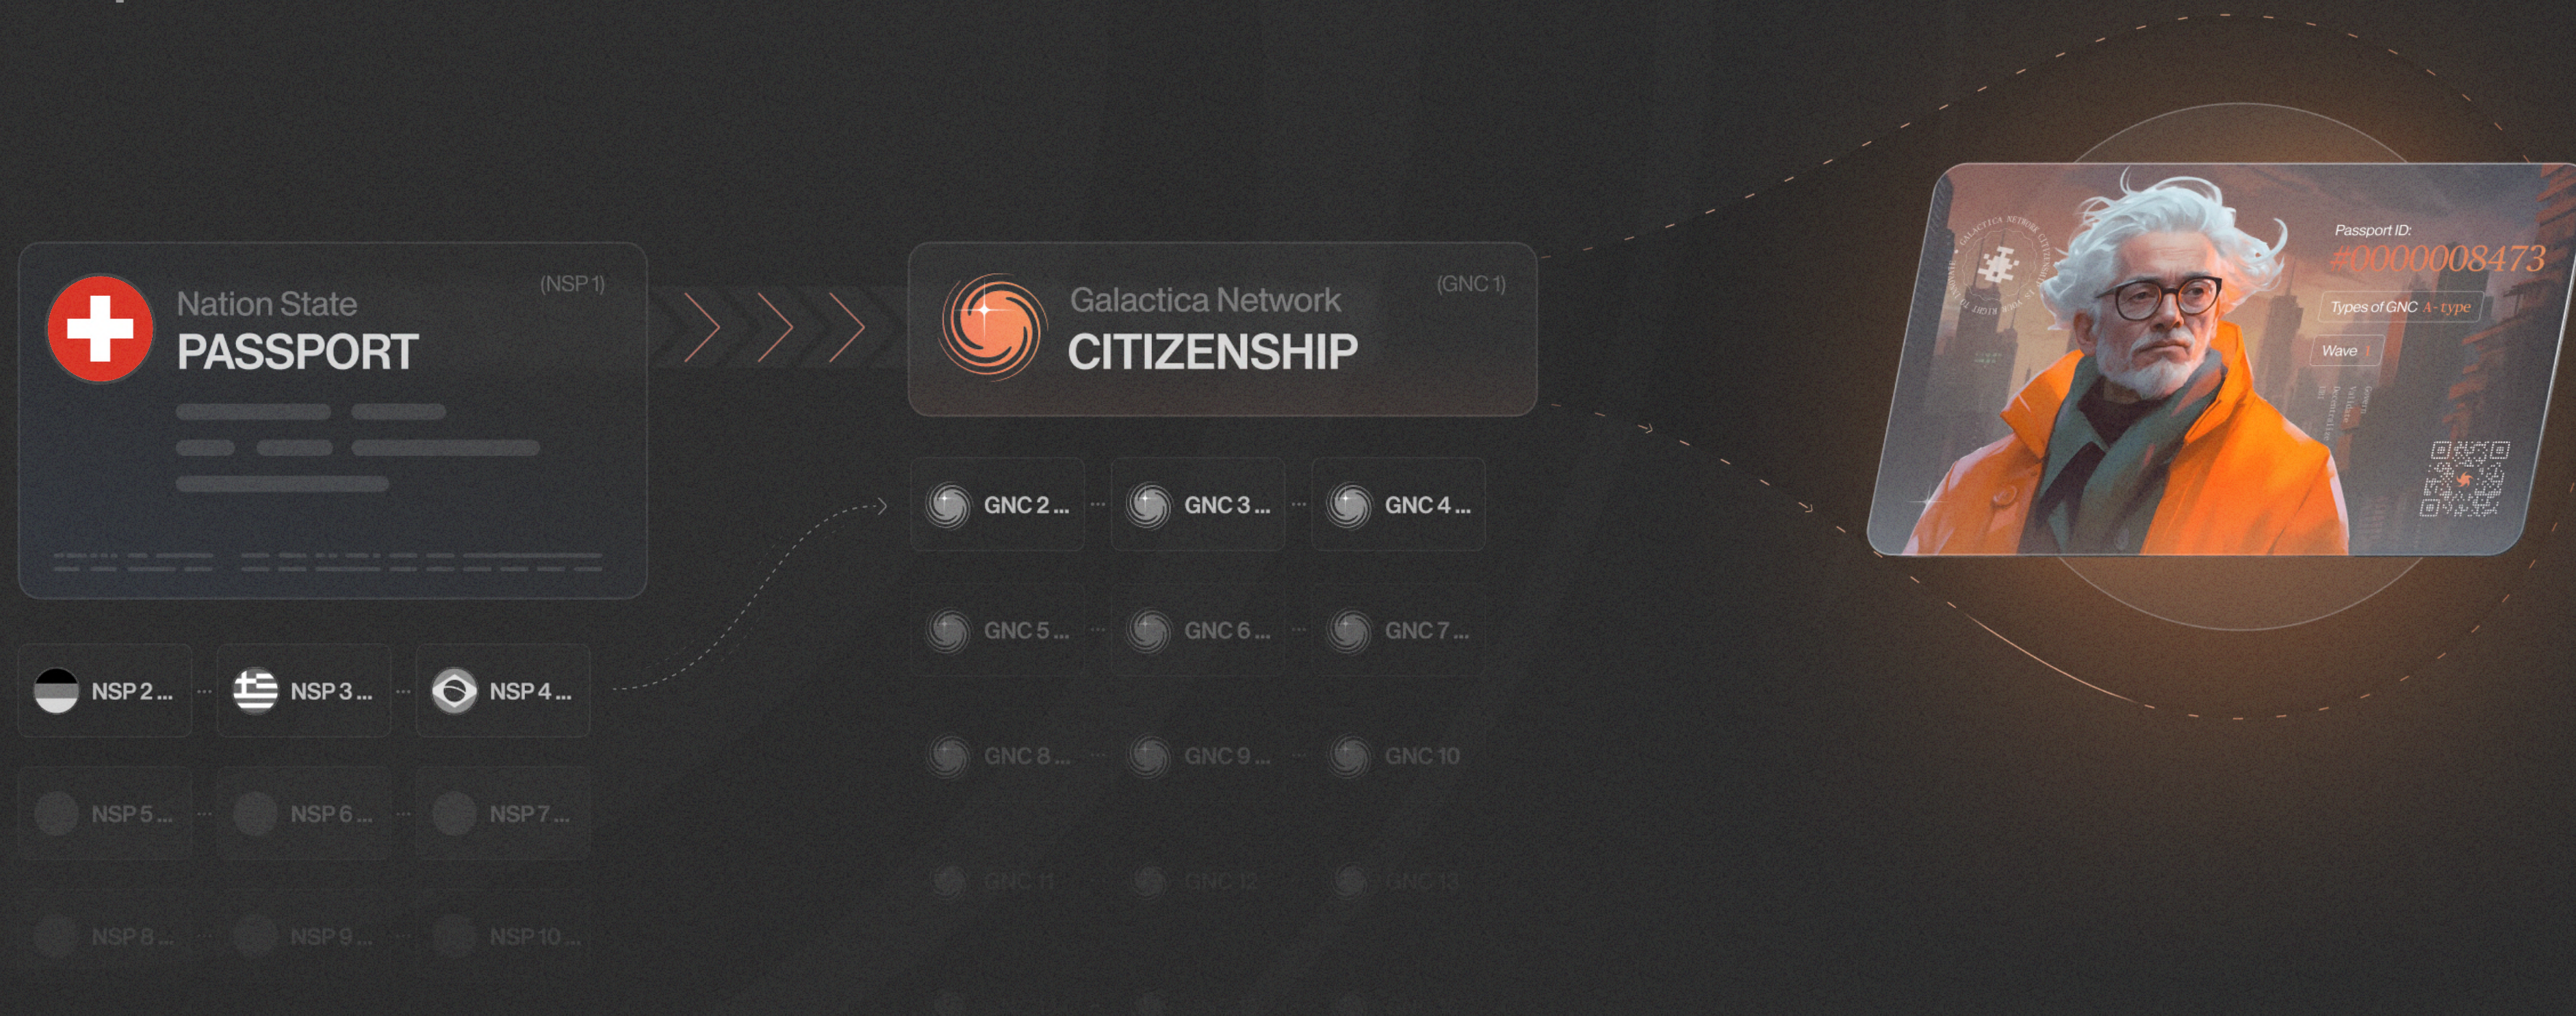

With the advent of **Galactica.com** an old dream of blockchain nations will finally have a holistic toolbox to self-organize and thrive.

But any nation is first and foremost, its citizens... right?

1. What is a GNC?

GNC is a passport, indicating one's belonging to Galactica.com Cypher State. Just like it goes with traditional Nation States, a Galactica.com passport grants its holder certain rights and responsibilities.

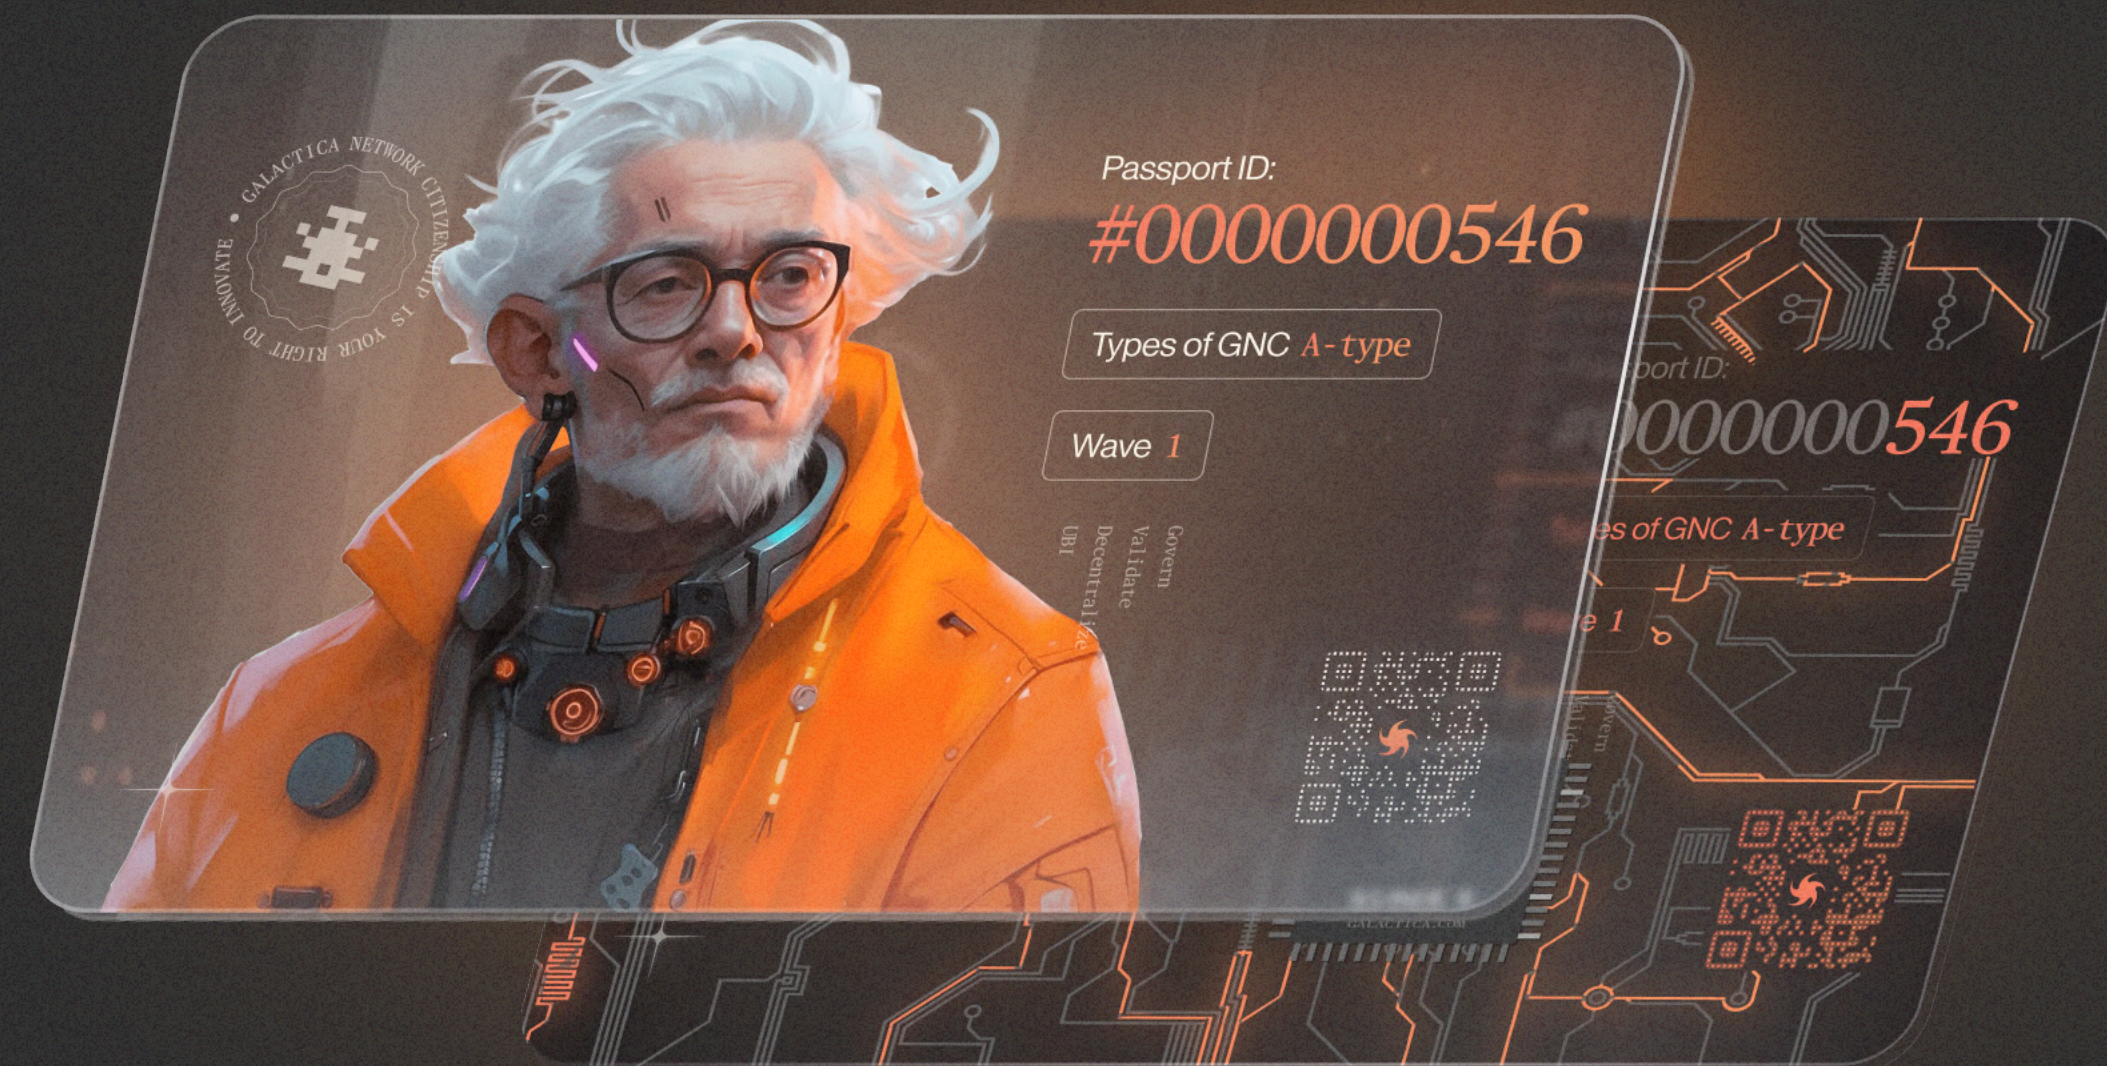

2. What GNC Entitles You To?

RIGHTS

- Galactica UBI
- Validator status — only Citizens can be validators
- Access to political framework — for example be an elected representative of one's fellow Citizens
- Citizen-only dApps: Use Citizen-only dApps, benefit from Citizen-only incentives and more

RESPONSIBILITIES

- Abide by Galactica.com Constitution (to be published)

Now let's dig a little deeper.

3. Right to Galactica UBI

UBI or Universal Basic Income is distributed every block across all Citizens of Galactica.com. The distributions are made in gUBI which is a token backed by a diversified portfolio of assets. Assets include but are not limited to:

- An allocation of **\$GNET** inflation (Galactica.com coin) defined by Parliament.
- IP royalties from public goods projects funded on Galactica.com (through Academy of Science).
- Proceeds from investments by the Sovereign (an entity similar to a Sovereign Wealth Fund in Galactica.com ecosystem) that holds a large % of the entire \$GNET supply.
- Citizen-only dApps: Use Citizen-only dApps, benefit from Citizen-only incentives and more.

In Nation states, inflation is a hidden tax on society's less affluent classes.
In Galactica.com inflation is a way to fund innovation that is then 'distributed' by means of UBI across all Citizens.

The distribution of UBI is merit-driven. The more value a Citizen contributes to the Network, the higher one's UBI share.

4 Right to Validation

The blocks of Galactica Network underpin not only a consensus on an accounting ledger, but a consensus of Citizens of a State, consensus over a social contract. In a Cypher State, validators are the apparatus of the government's executive branch. Hence, only Citizens can be Validators.

In order to understand how important Citizenship is, one needs to understand 3 statements:

- 1 Galactica Network employs DPOS (Delegated Proof Of Stake) consensus. Validators earn rewards proportional to \$GNET delegated to them.
- 2 The inflation function is logarithmic (just like in Bitcoin - lots of \$GNET is issued in the beginning and less and less as the time goes by).
- 3 There are few Citizens at genesis and the citizenry grows as time goes by.

Thus, those Citizens who can run nodes and get support from other Citizens will thrive and more so at the protocol inception.

5. Rights to join Galactica.com Political Institutions

Galactica.com Cypher State is governed by an intricate political framework that includes bicameral parliament, institutions like the Sovereign, Academy of Science, High Court and others. Any elected representatives of Citizens who run these institutions must be Citizens themselves.

Value of GNC Summary

So, we have established that in broad terms, GNC's value accrues from rights to UBI, validation rewards, and from rewards accruing for active participation in political institutions of Galactica.com. We have also established that the earlier you obtain GNC, the higher the potential rewards.

There are two other concepts that we need to cover:

- 1 GNC Acquisition Methods that have to do with how one can acquire - purchase or earn - a GNC.
- 2 GNC Activation Waves that have to do with when you can have your GNC enabled.

As we shall see, these two concepts are very related.

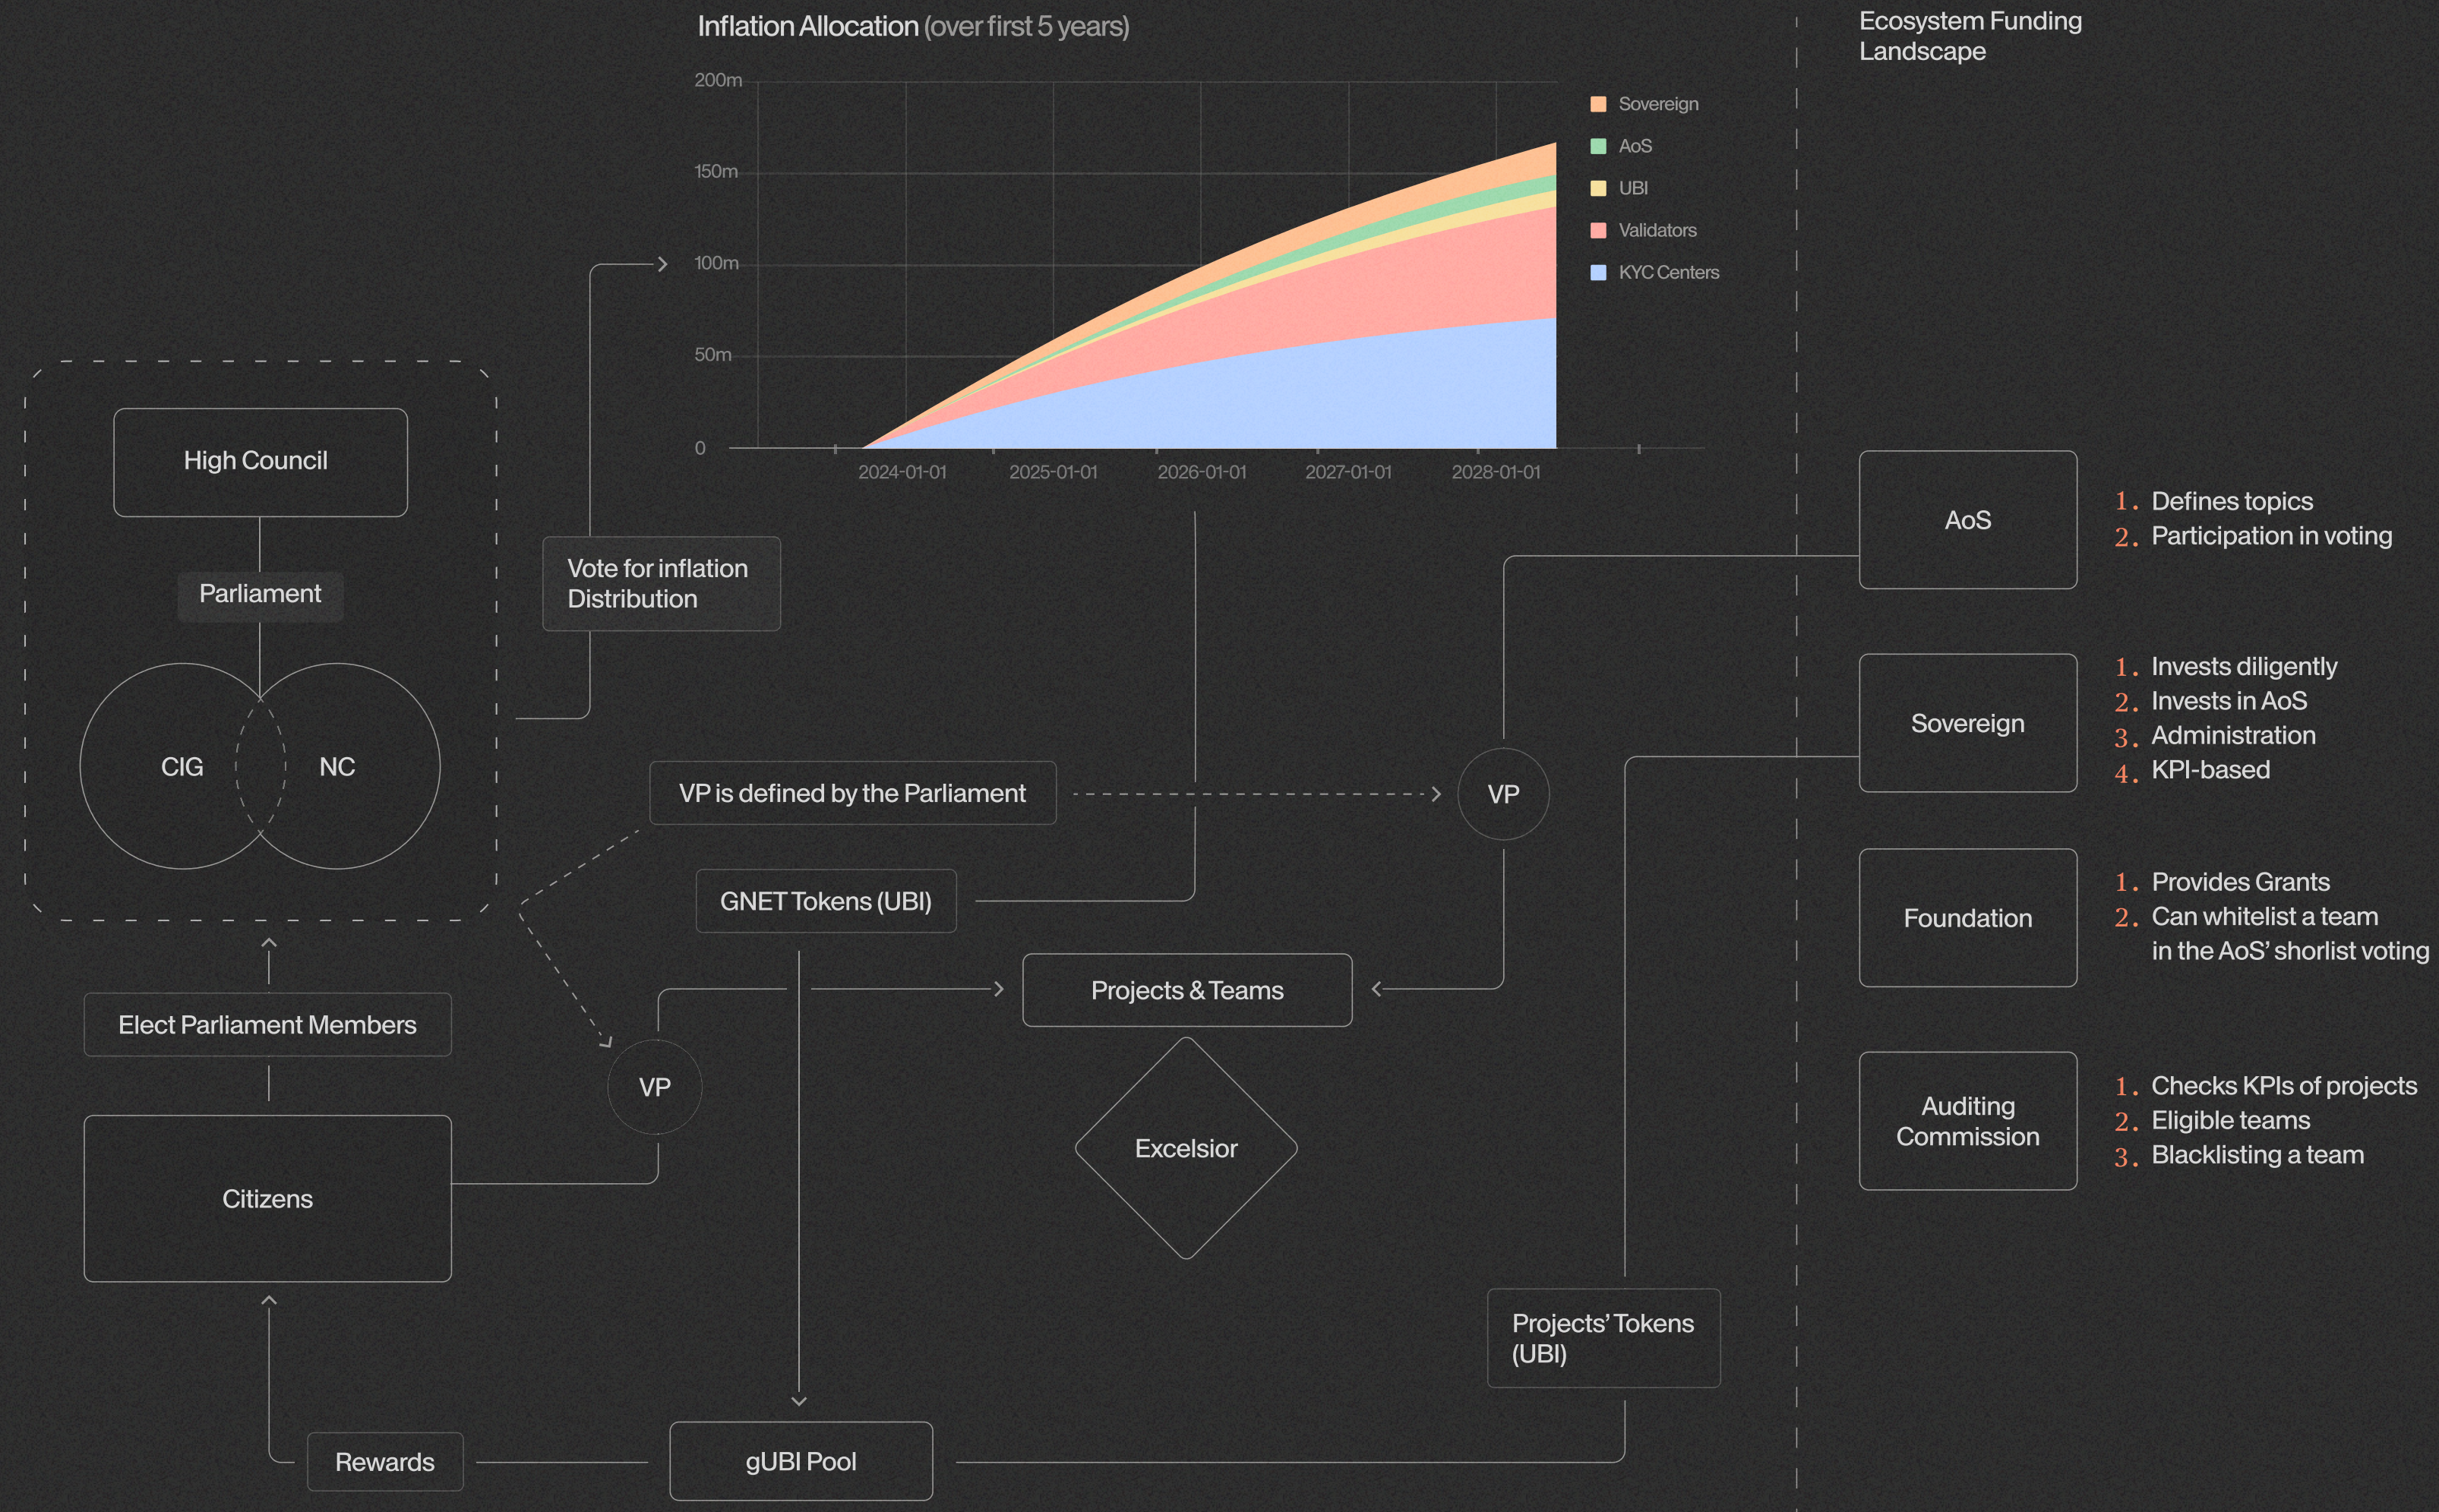

Now, let's delve into the GNC Waves, acquisition methods, and more in the upcoming sections.

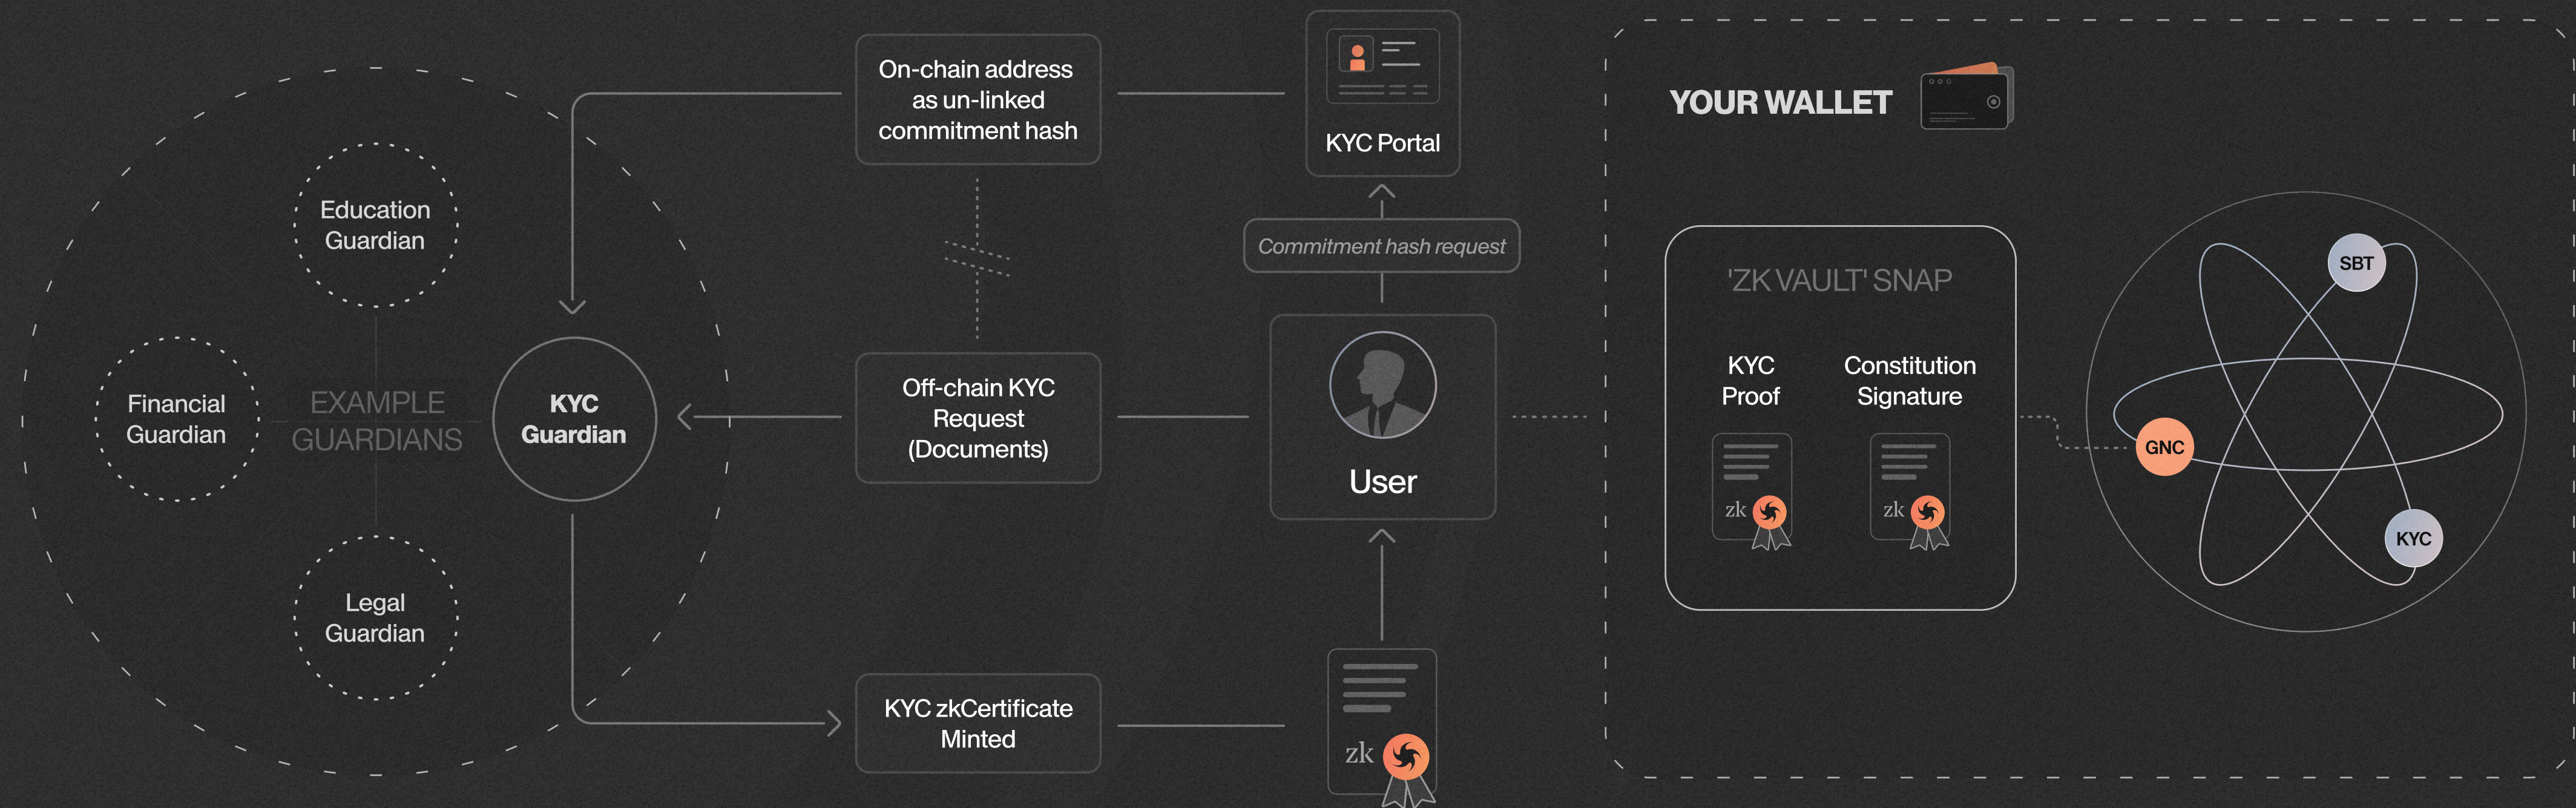

It is an honor to be entrusted with these responsibilities. It also implies sizable rewards.

6. Galactica Network Fully-fledged Governance

7. GNC Technology

last but not least,

Technologically, GNC is a Soul-Bound Token (non-transferable) that is granted to certain accounts in the Galactica Network, but only if they meet specific conditions, like passing a zkKYC.

All accounts holding such SBTs form a special whitelist within the system governance, UBI and other contracts, such as Galactica Network's political framework.
